

IN THE SPECIFICATION:

Please delete the paragraph beginning on page 1, line 7 and replace with the following:

The present application is related to co-pending U.S. Patent Application Serial No. _____ (~~IBM Docket No. AUS920010295US1~~) 09/844,342 entitled "EDITING HTML DOM ELEMENTS IN WEB BROWSERS WITH NON-VISUAL CAPABILITIES" filed even date herewith. The content of the above mentioned commonly assigned, co-pending U.S. Patent ~~applications are~~ application is hereby incorporated herein by reference for all purposes.

Please delete the paragraph beginning on page 6, line 16 and replace with the following:

In the depicted example, a server 104 is connected to network 102 along with storage unit 106. In addition, clients 108, 110, and 112 also are connected to network 102. These clients 108, 110, and 112 may be, for example, personal computers or network computers. In the depicted example, server 104 provides data, such as boot files, operating system images, and applications to clients 108-112. Clients 108, 110, and 112 are clients to server 104. Network data processing system 100 may include additional servers, clients, I/O devices 114, 116, and 118, and other devices not shown.

Please delete the paragraph beginning on page 8, line 19 and replace with the following:

With reference now to Figure 3, a block diagram illustrating a data processing system is depicted in which the present invention may be implemented. Data processing system 300 is an example of a client computer. Data processing system 300 employs a peripheral component interconnect (PCI) local bus architecture. Although the depicted example employs a PCI bus, other bus architectures such as Accelerated Graphics Port

(AGP) and Industry Standard Architecture (ISA) may be used. Processor 302 and main memory 304 are connected to PCI local bus 306 through PCI bridge 308. PCI bridge 308 also may include an integrated memory controller and cache memory for processor 302. Additional connections to PCI local bus 306 may be made through direct component interconnection or through add-in boards. In the depicted example, local area network (LAN) adapter 310, SCSI host bus adapter 312, and expansion bus interface 314 are connected to PCI local bus 306 by direct component connection. In contrast, audio adapter 316, graphics adapter 318, and audio/video adapter 319 are connected to PCI local bus 306 by add-in boards inserted into expansion slots. Expansion bus interface 314 provides a connection for a keyboard and mouse adapter 320, modem 322, and additional memory 324. Small computer system interface (SCSI) host bus adapter 312 provides a connection for hard disk drive 326, tape drive 328, and CD-ROM drive 330, and DVD drive 332. Typical PCI local bus implementations will support three or four PCI expansion slots or add-in connectors.
